

Senior Living

Technology meets care with intelligent procurement features designed just for senior living.

We've provided procurement solutions to senior living facilities since 2002, so we speak your language. As the industry has grown to incorporate independent living, assisted living, and memory care, our platform and features have expanded as well.

Effortless Resident Charges

You can easily dispense and track supplies and services used by individual residents. Multiple entry methods, including scanners, mobile apps, and recurring charges, accommodate your preferences.

No Supplier Transaction Fees

Many procurement solutions charge suppliers a transaction fee for sending orders to them, and these charges are almost always passed back to you either on the invoice or buried in item prices. We never charge suppliers a fee.

Responsive Budgets

Optionally allocate and track spend by creating separate budgets for each cost center. Budgets can be based on fixed amounts or set to adjust based on daily resident census counts.

Flexible Ordering Methods

Ordering medical supplies differs from ordering food or maintenance items. Food orders are often best built directly on vendor websites, but facilities still need purchasing control. SmartPO addresses this challenge through punchouts, which allow you to shop and build orders directly on vendor sites. Orders are then automatically transferred back into SmartPO for approval before being electronically transmitted to vendors.

Third-Party System Integration

SmartPO streamlines operations by integrating with the most widely used software systems in senior living. These include EMR, accounting, and billing systems.

Expansive Vendor Connectivity

SmartPO currently connects with over 500 suppliers. We use EDI and punchouts for vendors that support direct connectivity. For smaller vendors, we send orders as formatted emails.
