

Ongoing Enhancements

Regular software releases demonstrate our deep commitment to continuously improving your procurement operations.

Decades of Experience

Great software applications should evolve and improve, and that has certainly been the case with SmartPO. We began with our first senior living group in 2002 and added functionality for surgery centers, physician practices, and clinics in 2007. Since then, we have continually enhanced SmartPO.

User Feedback

When our customers talk, we listen. The vast majority of our enhancement suggestions originate from customer suggestions, so they are based on real-world usage. We respond rapidly to constant changes in both the healthcare and technology industries that dictate adjustments to workflows, security, and integrations.

Frequent Releases

Enhancements are typically released 10-12 times per year. These smaller, frequent releases eliminate any disruptions that might result from a massive annual update. Additionally, issues or problems can be addressed very quickly.

Easy Updates

With no downtime or user effort, new releases are automatically updated for each SmartPO customer. We seamlessly incorporate new features and functions so that the look and feel, as well as the navigation, of the system remains consistent. Customers can elect whether or not to use enhancements based on their needs. Detailed release notes document all changes, and our customer success team is always happy to assist and provide guidance.
